Business Analyst | AI & Automation Delivery, Requirements & UAT, SQL & Python

PROFESSIONAL SUMMARY

- Business analyst with **4+ years** in business analysis and BI, now on **AI and automation** projects from discovery through testing and adoption, with the **SQL** and **Python** skills to work directly with the data and the build team.
- Led requirements, **prototyping and validation**, and **user acceptance testing (UAT)** for an **AI contract-review solution** across **six language releases** in a migration of about **60K accounts and 12K contracts**, then handed it to the business as a **self-serve tool** other teams now use.
- Built a **multi-agent workflow on n8n** my team uses, a nightly **ETL pipeline** into **BigQuery**, and a Python **AI agent** on the Claude API with **tool calling**, **RAG**, and an **evaluation suite**.
- Ran **process discovery sessions** and cracked a cross-system data problem a BI team had worked on for about two years, finding the **identifier** that showed where stalled orders stopped before billing.
- Co-founded a health-tech startup, raised two funding rounds, and led its **pivot** to an app for doctors that went on to reach **10,000+ users**. **MSc** in Marketing (Business Analytics minor) and **MBA**; Agile certified (**CSPO**, **SAFe POPM**).

WORK EXPERIENCE

Business Analyst, Process Intelligence (B2B AI), TELUS — January 2026 - Present

Remote, Canada

- Authored the **business requirements document (BRD)** for an AI contract-review solution in a post-acquisition migration, turning privacy requirements from Legal and the Data Trust Office into **acceptance criteria**, and wrote **Python** scripts (Selenium) that move contracts from Salesforce to Google Drive for review.
- Ran **prototyping and validation** with the AI team, Legal, and the Data Trust Office until the AI's risk summaries met their expectations, then ran UAT across **six language releases** with business and legal reviewers: logged issues and managed fix-and-retest cycles until each went live.
- Handed the solution to the business as a **self-serve tool** teams use for their own reviews (one used **7,000 of 8,500** AI outputs); part of the team that delivered about **$2.5M** in benefits, within which I identified **$408K** and drove its **business case** to senior leadership sign-off.
- Coordinate subject matter experts and the AI team on **LLM-assisted** billing adjustment review: mapped the **current state**, wrote the future-state **process design document**, and used Excel to pick the **top 5 request types**.
- Ran **process discovery sessions** on how order data flows from opportunity to billing, mapped **four core systems**, and found the identifier that **stitched records end to end**, showing on several hundred orders where unbilled orders stalled (about **20%** of closed-won orders in one product line).
- Built a nightly **ETL pipeline** (SQL, Python, YAML) from **Oracle into BigQuery**, deployed as Infrastructure-as-Code through a GitHub workflow with **automated CI checks** on every push.
- Co-built a **multi-agent workflow on n8n** (Claude via an enterprise gateway) that turns meeting transcripts into project charters and tasks, with command-based triggers, **validated JSON**, and **API/OAuth** integrations to Google Workspace, monday.com, and Redis; later moved it onto Claude Projects and Skills.
- Run weekly **stand-up-style meetings** with experts and developers, write charters and **weekly leadership updates**, and track **risks and dependencies** across concurrent initiatives.

Business Analyst, Baadraan Universal Trading — April 2020 - September 2021

Tehran, Iran

- Gathered functional and system **requirements** for a **new inventory system** at a retailer with **80,000+ active users**, and worked with developers and QA analysts to turn them into solution design and **UAT** criteria.
- Helped prioritize backlog features such as real-time inventory tracking and advanced search filters, which led to a **15%** increase in sales and **20%** fewer stockouts.
- Automated stock alerts for best-sellers with a **SQL trigger**, a cron job, and **Zabbix** real-time monitoring.

Co-Founder, CloudMed **March 2019 - March 2020**

Health-technology venture, Tehran, Iran

- Spotted that the first imaging product wasn't generating revenue, ran a customer-centric **market analysis**, then proposed and led the **pivot** to an educational social media app for doctors and built its foundation; the app went on to reach **10,000+ users** and about **$100K CAD** in annual revenue.
- Ran **discovery** and user interviews with imaging centers, doctors, patients, and administrators, and turned their needs and **Ministry of Health** privacy rules into **epics and user stories** with **acceptance criteria**.
- Ran product demos at imaging centers that increased client acquisition by **40%**, and raised about **$200K+** in each of two funding rounds: from an angel investor, then through 2nd place in the **100Startups** competition.

Jr. Business Analyst, Ayandeh Bank **November 2017 - March 2019**

Tehran, Iran

- Built **Power BI** dashboards and Excel reports tracking branch **KPIs** such as loan disbursement rates, non-performing loan (NPL) ratios, and customer acquisition.
- Helped senior analysts write functional specs and **user stories** in **Jira** for modules such as credit scoring, and took part in **UAT** for core banking updates, validating transaction posting and interest calculations.

PROJECTS

AI Product Finder (RAG), Personal Project **2026**

Python, Claude SDK, ChromaDB

- Built an **AI product finder** that runs locally with a search-style web page: users describe a problem or need, and a **Claude SDK** agent with **tool calling** uses **retrieval-augmented generation (RAG)** over **ChromaDB** to recommend a product or bundle from a catalog of **628 products**.
- Started with an annual report Q&A agent: built over raw HTTP first, cites pages, tested with an **evaluation suite**.

Fraud Detection, Personal Project **2024**

Python, scikit-learn, TensorFlow/Keras

- Compared **machine learning** and deep learning models on **285K card transactions**; **0.97 precision, 0.77 recall** on fraud.

EDUCATION

MSc Marketing, Minor in Business Analytics, Concordia University January 2022 - March 2025

Data mining, applied statistics, machine learning; Research Assistant (Python, SAS, SPSS) *Montreal, Canada*

Relevant coursework: *Foundations of Data Mining, Advanced Data Mining, Applied Statistical Linear Models, Research Methods, Consumer Research Methods, Consumer Psychology, New Product Development and Innovation, Branding*

MBA, Amirkabir University of Technology September 2017 - December 2019

Ranked top 0.5% of 40,000 *Tehran, Iran*

BSc Engineering, Petroleum University of Technology February 2013 - June 2017

SKILLS

- **Business Analysis & Delivery:** Requirements elicitation, process discovery, BRDs, user stories, acceptance criteria, current and future state process mapping, UAT, business cases, adoption and user enablement
- **AI & Automation:** Multi-agent workflows on n8n, prototyping and AI output validation, Claude Projects and Skills, LLM APIs (REST and anthropic SDK), tool calling, RAG, vector databases (ChromaDB), Selenium
- **Data & Technical:** SQL, Python, ETL, process mining, scikit-learn, TensorFlow/Keras, BigQuery (GCP), Oracle, MySQL, Power BI, Tableau, Excel, GitHub, CI checks, Infrastructure-as-Code (YAML)
- **Tools & Ways of Working:** Agile / Scrum, Jira, Confluence, monday.com, Visio, Mermaid, Salesforce (exposure)

CERTIFICATIONS & LANGUAGES

- **Certifications:** Certified SAFe Product Owner/Product Manager (POPM); Certified Scrum Product Owner (CSPO)
- **Languages:** English and Persian (fluent), French (intermediate to advanced)
