Business Analyst | AI & Automation Delivery, Requirements & UAT, SQL & Python

PROFESSIONAL SUMMARY

- Business analyst with 4+ years of experience, now on **AI and automation** projects, from the **BRD** through testing and adoption, with the **SQL** and **Python** skills to work directly with the data and the build team.
- Led requirements and **user acceptance testing (UAT)** for an **AI contract-review solution** across **six language releases** in a migration of about **60K accounts and 12K contracts**, then grew it into a **reusable self-serve capability** other teams now use.
- Built a **multi-agent workflow on n8n** my team uses, a nightly **ETL pipeline** into **BigQuery**, and a **Python AI agent** on the Claude API with **tool calling**, **RAG**, and an **evaluation suite**.
- Found the **identifier** a BI team had sought for two years, showing in a proof of concept where **20% of closed-won orders** in one product line stalled before billing.
- Co-founded a health-tech startup and raised funding twice. **MSc** (Business Analytics minor) and **MBA**; Agile certified (**CSPO**, **SAFe POPM**).

WORK EXPERIENCE

Business Analyst Process Intelligence and Data Operations, TELUS

January 2026 - Present

Remote, Canada

- Authored the **Business Requirements Document (BRD)** for an AI contract-review solution in a post-acquisition migration, turning privacy requirements from Legal and the Data Trust Office into **acceptance criteria**, and wrote a **Python** script using **Selenium** that downloads each contract from Salesforce and moves it to Google Drive ahead of the AI review.
- Ran UAT across **six language releases** with business and legal reviewers and an AI team from another organization: validated output against requirements, logged issues, and managed fix-and-retest cycles until each went live.
- Drove **adoption** beyond the original project by turning the solution into a **reusable self-serve capability** other teams use on their own documents; the program delivered about **\$2M** in benefit, and I identified a **\$408K** opportunity and helped build its business case.
- Coordinate subject matter experts and the AI team on an **LLM-assisted review** initiative for a billing-adjustment backlog: mapped the **current-state** process of how requests are created, reviewed, and decided, designed the **future state** in the **process design document**, and isolated the **top 5 request types** in Excel to scope the proof of concept.
- Mapped data fields across **four core systems** and found the unique identifier that **stitched records end to end**, giving the business first-time visibility into where several hundred stalled orders were stuck.
- Built a nightly **ETL pipeline** (SQL, Python, YAML) from **Oracle into BigQuery**, deployed as Infrastructure-as-Code through a GitHub workflow with **automated CI checks** on every push.
- Co-built a **multi-agent workflow on n8n** (Claude via an enterprise gateway) that turns meeting transcripts into project charters and tasks, with command-based triggers, **validated JSON**, and **API/OAuth** integrations to Google Workspace, monday.com, and Redis; later upgraded it onto Claude Projects and Skills.
- Keep **cross-functional communication** flowing across business, legal, technology, and data teams with project charters, **business cases**, and weekly leadership updates, and track **risks, dependencies, and action items** across concurrent initiatives.

Business Analyst, Baadraan Universal Trading

April 2020 - September 2021

Tehran, Iran

- Wrote **user stories**, **acceptance criteria**, and the **backlog** for a new inventory system and coordinated delivery with cross-functional teams.
- Automated stock monitoring with a **SQL trigger** and real-time alerts (cron, Zabbix), and normalized and partitioned a MySQL database for a **10%+** efficiency gain.

Co-Founder, CloudMed

March 2019 - March 2020

Health-technology venture, Tehran, Iran

- Co-founded a medical imaging startup building one cloud service where doctors diagnose assigned images in a medical viewer and patients see reports from all their doctors; gathered **requirements** from imaging centers, doctors, patients, and developers, wrote the **user stories**, and ensured Ministry of Health regulations were met.
- Raised funding twice, from an angel investor and then a VC package after placing **2nd** in the 100Startups competition (**\$200K+**), and later **pivoted** the product into an educational social app for doctors that now serves thousands of users.

Jr. Business Intelligence Analyst, Ayandeh Bank

November 2017 - March 2019

Tehran, Iran

- Wrote **SQL** for extraction and analysis of banking transactional data and built **Power BI** dashboards tracking branch KPIs.
- Assisted product owners in refining strategies, OKRs, KPIs, and roadmaps for customer-facing tools.

PROJECTS

Backlog Triage Agent, Personal Project

2026

Python, Claude API, ChromaDB

- Built a **backlog triage agent** in **Python** on the **Claude API**, first over raw **REST** to learn the request and response mechanics end to end, then on the official **anthropic SDK**.
- Implemented **tool calling** with JSON Schema tool definitions and a **multi-tool agent loop** that dispatches each tool request to the matching Python function until the model reaches a final answer.
- Added **retrieval-augmented generation (RAG)** with a **ChromaDB** vector store, so the agent retrieves similar past backlog items before recommending a priority.
- Wrote an **evaluation suite** of test cases that checks the agent picks the right tools and returns the expected priority for known inputs.

EDUCATION

MSc Marketing, Minor in Business Analytics, Concordia University

January 2022 - March 2025

Data mining, applied statistics, machine learning; Research Assistant (Python, SAS, SPSS)

Montreal, Canada

MBA, Amirkabir University of Technology

September 2017 - December 2019

Ranked top 0.5% of 40,000

Tehran, Iran

BSc Engineering, Petroleum University of Technology

February 2013 - June 2017

SKILLS

- **Business Analysis & Delivery:** Requirements elicitation, BRDs, user stories, acceptance criteria, current and future state process mapping, UAT, business cases, risk and dependency tracking, adoption support
- **AI & Automation:** Multi-agent workflows on n8n, Claude Projects and Skills, LLM APIs (REST and anthropic SDK), tool calling, RAG, vector databases (ChromaDB), AI output evaluation, Selenium
- **Data & Technical:** SQL, Python, ETL, BigQuery (GCP), Oracle, MySQL, Power BI, Tableau, Excel, GitHub, CI checks, Infrastructure-as-Code (YAML)
- **Tools & Ways of Working:** Agile / Scrum, Jira, Confluence, monday.com, Visio, Mermaid, Salesforce (exposure)

CERTIFICATIONS & LANGUAGES

- **Certifications:** SAFe Product Owner/Product Manager (POPM), Scaled Agile; Certified Scrum Product Owner (CSPO), Scrum Alliance; Market Research & Consumer Behavior, Coursera
- **Languages:** English (Proficient), French (Intermediate), Persian/Farsi (Native)
